

**APPLICATION MODERNIZATION  
SERVICES**

**Tuning Your  
Business For  
Performance  
And Agility**

IT and enterprise applications are the very backbone of every modern enterprise, and maintaining high levels of performance are critical and continuous processes. However, most organizations today have environments where complex legacy applications coexist uneasily with newer cloud and subscription-based platforms, and

achieving peak performance can often be a daunting project. But to stay on the path to hypergrowth, organizations need to actively consider modernizing legacy applications and elevating their entire application landscape to deliver on the expectations of customers, partners, and their own employees.

Application modernization, when done correctly and thoroughly, accelerates your digital journey towards:

### Boost efficiency with scalability and agility

To remain competitive, it's essential to be able to pivot in new market conditions and quickly align resources with needs.

### Improve security and reduce risk

By adopting a centralized and automated workflow, native cloud security efficiently reduces the risk of disruption and supports continued operations in a regulated environment.

### Optimize IT costs

As the expense of IT infrastructure and resources shifts to cloud providers who can handle operations and maintenance, modernizing can assist in reducing capital investments.

### Innovate faster

With modernization and cloud migration, you can use new technology to help lead critical decisions and obtain insights into brand-new growth potential.

## Unlock the possibilities with Application Modernization

Amzur is your trusted advisor for end-to-end modernization services to assist clients in converting to an agile and cloud-ready ecosystem. We have a wealth of analytical and accelerating tools, automation, technological

collaborations, modernization models, and cloud-native frameworks built to provide results quickly and at scale. We are experts in application modernization.

We support these offerings with our managed services:

- Leverage AI and automation to help your cloud-based apps generate more value and increase operational efficiency.
- An agile transformation across the modernization journey with DevOps and CI/CD processes translates into faster delivery and improved stability in production.
- With an integrated framework utilizing intelligent and automated QA processes throughout to incorporate quality.
